

Cold & Flu Defense™; www.coldfluddefense.com

Most OTC cold & flu medications suppress symptoms but do not cure the cold or flu. People receive vaccine shots against flu viruses. However, since the flu viruses mutate frequently, even a combination of vaccines is only about 15-30% effective (A. Fauci). A drug Tamiflu® relieves the intensity of the flu and shortens a recovery time if it is taken within the first 48 hours. But, in many cases, by the time patients rush to physicians to request prescription drugs, it is too late.

Cold & Flu Defense™ works like Tamiflu®, but without a prescription. When it is taken at the time of infection, it kills cold & flu overnight. You thus do not suffer. If it is taken a little later, it shortens the time of suffering. Cold & Flu Defense™ activates the innate immune system and kills cold & flu viruses with a 100% efficiency. Cold & Flu Defense™ is a real blessing for people who suffer from respiratory disease, or people whose immune systems are compromised.
